Vanessa Lin

(925)-487-2398 | valin@berkeley.edu | valin1.github.io | valin1 | valin1

Education

University of California, Berkeley — *Berkeley, CA*

B.A. Computer Science, B.A. Applied Math | GPA: 3.77/4.00 | Activities: UPE: CS Honors Society, EECS Honors Program — *August 2017 - May 2021*

- Completed Coursework: Machine Learning, Operating Systems, Database Systems, Artificial Intelligence, Computer Vision, Algorithms, Data Structures, Machine Structures, Discrete Mathematics and Probability, Multivariable Calculus, Linear Algebra, Real Analysis, Abstract Algebra
- In-progress Coursework*: Numerical Analysis, Complex Analysis, Deep Neural Networks

Experience

Google — *Mountain View, CA*

Software Engineering Intern — *May 2020 - August 2020*

- Built a DNN and a logistic regression model with Keras to perform binary classification on quality to help advertisers better understand their advertisements' effectiveness and recommend improvements, as part of Search Ads
- Constructed a parallel data-processing pipeline, using a Map Reduce service and C++, to generate ground truth data

RISELab: Real-time Intelligent Secure Explainable — *Berkeley, CA*

Undergraduate Researcher | Electrical Engineering and Computer Science Dept

Visual World DB — *August 2020 - Present*

- Designing and building a high-level API for users to process and query video data, such that the architecture is optimized for multi-video applications, mentored by Maureen Daum, PhD candidate, Brandon Haynes, PhD, and Prof. Alvin Cheung

Koopman Theory and Autoencoders — *August 2019 - Present*

- Exploring stability using linear algebra techniques, recurrent neural networks, and physically-based variational autoencoders with postdoctoral fellow, N. Benjamin Erichson and Prof. Michael Mahoney

E-mission — *February 2018 - August 2019*

- Designed a study that promotes sustainable transportation habits around campus and the city of Berkeley and looks at normative behavioral patterns towards automated suggestions using the E-mission platform under K.Shankari, PhD candidate, Prof. David Culler, and Prof. Randy Katz

Google — *Cambridge, MA*

Engineering Practicum Intern — *May 2019 - August 2019*

- Developed a hotel cancellation feature in which users will be able to use for Book on Google, which is a platform that facilitates hotel booking on Google without breaking the search flow, and reduced no-show rate of 3% to 0.5%
- Facilitated the process of hotel cancellation for users by constructing a server to manage the transfer of information between a user's cancellation request to cancelling the booking through partner APIs, using Java and Google Web Server

Sandia National Laboratories — *Livermore, CA*

Research and Development: Software Developer Intern

Project on Nuclear Gaming — *August 2018 - January 2019*

- Developed an interactive data collection web app for the game SIGNAL (https://pong.berkeley.edu/e-game/) for proctors to input data collected from board game rounds and facilitate analysis of nuclear deterrence and conflict escalation
- Built application with React and MongoDB to keep track of diplomatic and economic actions for further data analysis

Capabilities Development Framework (a Web GIS App) — *June 2018 - August 2018*

- Added capabilities to the app for the Department of Homeland Security, using OpenLayers, GeoServer, SQL, JavaScript, and PHP, to incorporate live data-streaming with temperature data

Publications

Forecasting Sequential Data using Consistent Koopman Autoencoders

Omri Azencot*, N. Benjamin Erichson*, **Vanessa Lin**, Michael W. Mahoney — *Accepted to ICML 2020*

In this work, we propose a novel Consistent Koopman Autoencoder model which, unlike the majority of existing work, leverages the forward and backward dynamics. The key to our approach is a new analysis that unravels the interplay between consistent dynamics and their associated Koopman operators.

Projects

OmniTraffic — *CalHacks*

github.com/valin1/omni-uber-visualization — *November 2018*

- Used OmniSci's Cloud Analytics and deck.gl (WebGl-powered framework) to find times of frequent traffic in various public transportation routes, with Uber Movement Data and visualize data analytics

Skills and Qualifications

Languages/Libraries

Python, Java, C++, SQL, HTML/CSS, JavaScript, PHP, TensorFlow, Android, AWS, Git, Bash, LaTeX, Vim
